1: Glacken E-5 (1951-1952) 1953 AC7 Okinawa AC7

The native medicine, including the use of plants and fish as medicines, the native doctor, the use of cauterization, the golden needle, slashing, and acupuncture, seem to be disappearing in favor of modern patent medicines and drugs, and scientific medicine, nursing, and midwifery. Of all the traditional practices (ultimately derived from China), slashing and burning with moguza seem to have the greatest vitality.

Tattooing

Tattooing (ireizumi)in Japanese, dake in Okinawan) is a subject of great historical interest in the Ryukyu chain. In Okinawa, it exists now only among elderly women (in the late sixties and seventies), as it was forbidden by law when the Japanese annexed the islands. Tattooing usually was done on the back of the hands, including the fingers, parts of the wrist, and the knuckles. The design was put on by spreading India ink (often with sake or awamori added) on the surface, pricking out the design and wiping off the surplus, repeating the operation for the lighter parts. To my knowledge, there was no facial tattooing.

Until quite recently tattooing was practiced on men as well. Basil Hall in 1816 wrote of a landing in the south of Okinawa island. "Most of these people had fish spears tatooed on their arms in the form of a trident, with rude barbs." On the right arm it was called (in Hall's transcription) "oodeemaw," and on the left, "tooga." Apparently this was confined to fishermen. Furness in his account of the Luchus (1899) observed such markings among young and mature men in Itoman. The explanation given him was that they were a protection against evil spirits. Furness also discussed the theory that tattooing was historically connected with weaving. Simon, in an interesting speculative discussion, based on the designs of cloth in Miyako and their correspondence with house or family markings thought that the tattooing was a means of identifying women's membership in a family.7

This interesting idea unfortunately did not occur to me while in the villages, but the notion that tattooing may have been related

7 Hall's Voyage, as cited, Vocabulary (no pagination). Hall includes sketches of the marks. Furness, Life in the Luchu islands, as cited, 9. See also Simon's extremely interesting discussion, Beitrage zur Kenntnis der Riukiu-Insaln, as cited, 134-150. Furness and Simon are especially valuable because they personally observed instances of tattooing at a time when it was much more commonly seen. Both authors reproduce patterns which show differences among the islands and among individuals.
